ezDL – User Guide

Working Group Information Engineering, University of Duisburg-Essen

Contents

1 Configuration **5**
1.1 `user.properties` 5
1.2 `connection.properties` 5

Chapter 1

Configuration

There are some configuration files you can use to tune ezDL to your needs.

Windows It is located in your home directory as `ezdl`.

Linux It is located in your home directory under the name `.ezdl`. Because of the dot (".") at the beginning of the name, the directory is hidden. In Nautilus, press Ctrl-H to show the hidden files and directories before you can change into the directory.

1.1 `user.properties`

`search.timeout_s` The timeout in seconds for searches. The default timeout is 10 seconds, if this property is not set.

1.2 `connection.properties`

`mta.host` The host name of the MTA, which is the server that handles connections between the front end and the back end. The default is `mta.ezdl.de`.

`mta.port` The port number of the MTA. The default is `8080`.
